

## Medicare COVID-19 Hospitalization Trends Report Methodology

### Overview

CMS publicly released the first Preliminary Medicare COVID-19 Snapshot in June 2020 during the early stages of the Public Health Emergency for COVID-19. That report focused on COVID-19 cases and hospitalizations data for Medicare beneficiaries with a COVID-19 diagnosis. Throughout 2020 and 2021, that report was subsequently updated with refreshed data 13 times. Beginning in October 2021, CMS shifted its public COVID-19 reporting away from cumulative case and hospitalization rates to hospitalization trends over time with the release of this report, the Medicare COVID-19 Hospitalization Trends Report.

The Medicare COVID-19 Hospitalization Trends Report presents information about Medicare beneficiaries who were hospitalized with a COVID-19 diagnosis. CMS updated this report four times throughout 2022 and 2023, with the last release published in January 2024. Additional details about the service dates and the data 'as of' dates for each of Preliminary Medicare COVID-19 Snapshot and Medicare COVID-19 Hospitalization Trends Report releases can be found in the tables below.

#### Preliminary Medicare COVID-19 Snapshot: Release Dates

| Release # | Data as of: | Service Through Date | Name on Website (under Previous Versions)                                       | Date of Public Release |
|-----------|-------------|----------------------|---------------------------------------------------------------------------------|------------------------|
| 1         | 6/11/20     | 5/16/20              | Included in Medicare COVID-19 Data Snapshots and Files for Services in 2020.zip | 6/22/20                |
| 2         | 7/17/20     | 6/20/20              | Included in Medicare COVID-19 Data Snapshots and Files for Services in 2020.zip | 7/28/20                |
| 3         | 8/14/20     | 7/18/20              | Included in Medicare COVID-19 Data Snapshots and Files for Services in 2020.zip | 9/3/20                 |
| 4         | 9/11/20     | 8/15/20              | Included in Medicare COVID-19 Data Snapshots and Files for Services in 2020.zip | 10/2/20                |
| 5         | 10/9/20     | 9/12/20              | Included in Medicare COVID-19 Data Snapshots and Files for Services in 2020.zip | 11/19/20               |
| 6         | 12/18/20    | 11/21/20             | Included in Medicare COVID-19 Data Snapshots and Files for Services in 2020.zip | 1/15/21                |
| 7         | 1/22/21     | 12/26/20             | Included in Medicare COVID-19 Data Snapshots and Files for Services in 2020.zip | 3/24/21                |
| 8         | 3/19/21     | 2/20/21              | Medicare COVID-19 Data Snapshot - Services through 2021-02-20 (PDF)             | 4/26/21                |
| 9         | 4/16/21     | 3/20/21              | Medicare COVID-19 Data Snapshot - Services through 2021-03-20 (PDF)             | 5/20/21                |

|    |          |          |                                                                     |          |
|----|----------|----------|---------------------------------------------------------------------|----------|
| 10 | 5/21/21  | 4/24/21  | Medicare COVID-19 Data Snapshot - Services through 2021-04-24 (PDF) | 6/30/21  |
| 11 | 7/16/21  | 6/19/21  | Medicare COVID-19 Data Snapshot - Services through 2021-06-19 (PDF) | 8/20/21  |
| 12 | 8/20/21  | 7/24/21  | Medicare COVID-19 Data Snapshot - Services through 2021-07-24 (PDF) | 9/24/21  |
| 13 | 9/17/21  | 8/21/21  | Medicare COVID-19 Data Snapshot - Services through 2021-08-21 (PDF) | 10/29/21 |
| 14 | 12/17/21 | 11/20/21 | Currently Displayed Version (N/A)                                   | 1/26/22  |

#### Medicare COVID-19 Hospitalization Trends Report: Release Dates

| Release # | Data as of: | Service Through Date | Name on Website (under Previous Versions)                                       | Date of Public Release |
|-----------|-------------|----------------------|---------------------------------------------------------------------------------|------------------------|
| 1         | 9/17/21     | 8/21/21              | Medicare COVID-19 Hospitalization Trends Report Services through 2021-08-21.zip | 10/29/21               |
| 2         | 4/29/22     | 12/31/21             | Medicare COVID-19 Hospitalization Trends Report Services through 2021-12-31.zip | 6/8/22                 |
| 3         | 10/28/22    | 6/30/22              | Medicare COVID-19 Hospitalization Trends Report Services through 2022-06-30.zip | 12/1/22                |
| 4         | 6/2/23      | 12/31/22             | Medicare COVID-19 Hospitalization Trends Report Services through 2022-12-31.zip | 6/21/23                |
| 5         | 11/10/23    | 6/30/23              | Currently displayed version (N/A)                                               | January 2024           |

All data presented in these releases were preliminary at the time of publication and may have changed in any subsequent updates.

#### **Methodology**

**Data Source:** Data are sourced from CMS's Integrated Data Repository (IDR) using final action Medicare Fee-for-Service claims data and Medicare Advantage encounter data. Medicare enrollment data and beneficiary characteristics are sourced from CMS's Chronic Conditions Warehouse (CCW).

**Medicare Population:** Beneficiaries enrolled in Medicare Fee-for-Service (i.e., Original Medicare) or Medicare Advantage at any time since January 1, 2020. The population is restricted to beneficiaries covered by hospital insurance (i.e., Part A).

**Medicare COVID-19 Hospitalizations:** A count of hospitalizations with a diagnosis of COVID-19 on an **inpatient hospital** fee-for-service claim or encounter record. Inpatient hospital claims or encounter records that had overlapping service dates are considered a single hospitalization. For fee-for-service claims, we also considered any claims that began the day after another claim ended and also had the same provider type as a single hospitalization. Encounter records do not have complete information on provider type. Hospitalizations are counted in each month in which the hospitalization began.

These hospitalizations include data for the following hospital settings: Inpatient Prospective Payment System (IPPS), Critical Access Hospitals (CAH), inpatient rehabilitation facilities, long term care facilities and inpatient psychiatric facilities<sup>1</sup>.

The following International Classification of Diseases (ICD), Tenth Revision (ICD-10), principal or secondary diagnosis codes are used to identify COVID-19 cases on claims and encounters:

- From January 1 to March 31, 2020: B97.29 (other coronavirus as the cause of diseases classified elsewhere) and
- From April 1, 2020 to current: U07.1 (2019 Novel Coronavirus, COVID-19).

*Note:* The Centers for Disease Control and Prevention (CDC) has published guidance for ICD-10 coding of COVID-19: <https://www.cdc.gov/nchs/data/icd/COVID-19-guidelines-final.pdf>. However, the accuracy of diagnosis codes may be influenced by the information recorded by the clinician (e.g., omitting information or using synonyms or abbreviations to describe a patient's condition), as well as the medical coder (e.g., experience and training can influence precision of coding). As a result, diagnosis information from claims/encounters is considered less reliable than clinical information collected through other methods (e.g., chart reviews). This type of clinical information is generally not necessary for CMS to run its programs, so it is only collected in limited circumstances (e.g., for program integrity purposes).

**Medicare COVID-19 Hospitalizations per 100,000:** The rate of Medicare COVID-19 hospitalizations per 100,000 is calculated by taking **Medicare COVID-19 Hospitalizations** divided by the **Medicare Population** with Part A insurance in a given month for monthly rates. Biannual rates are calculated with the monthly average Medicare Population with Part A insurance during the six-month period. Yearly rates are calculated with the monthly average Medicare Population with Part A insurance during that year.

**State:** The state of the beneficiary is based on mailing address and comprises of the 50 States, the District of Columbia, Puerto Rico, US Virgin Islands, and all other outlying areas of the US aggregated into a "Territories" category. If a beneficiary's state of residence is unknown, the beneficiary is assigned to the "Missing Data" category.

**Rural/ Urban:** Rural/ Urban status is defined using the Rural Urban Commuting Area Crosswalk (RUCA). The RUCA crosswalk relies on commuting data from the US Census, as well as ZIP Codes. A beneficiary's mailing ZIP code is used to define rural and urban locations. Due to the changing nature of ZIP Code data, there is a small subset of beneficiaries that cannot be classified into a rural area or urban area.

---

<sup>1</sup> Inpatient settings include Original Medicare (fee-for-service) claims with claim type '60' and Medicare Advantage encounters with claim types '4011' and '4012'.

**Medicare Entitlement:** Medicare entitlement is available to three basic groups of "insured individuals" - the *Aged*, the *Disabled*, and those with *end stage renal disease (ESRD)*. Medicare entitlement can change over time for beneficiaries that were initially entitled to Medicare because of disability or ESRD before the age of 65. For purposes of this reporting, beneficiaries who have ESRD, are Aged with ESRD or are Disabled with ESRD are classified as ESRD; otherwise beneficiaries are classified as Disabled or Aged.

**Medicare Eligibility Status:** A beneficiary can be eligible for Medicare and/or Medicaid. Beneficiaries enrolled in both Medicare and Medicaid simultaneously are considered *Dual Medicare and Medicaid*. A beneficiary enrolled in Medicare alone is *Medicare Only*. Please note that for beneficiaries enrolled in both Medicare and Medicaid, only claims and encounters covered by Medicare are included in this reporting.

**Age:** A beneficiary's age is measured at the end of the year during which they had a hospitalization, or at the time when the beneficiary died.

**Race/ Ethnicity:** A beneficiary's race/ ethnicity is created by taking the beneficiary race code that has historically been used by the Social Security Administration (and is in turn used in CMS's enrollment database) and applying an algorithm that improves the race/ethnicity classification, particularly for those who are Hispanic or Asian/Pacific Islander. This algorithm, developed by the Research Triangle Institute (RTI) and is thus often referred to as the "RTI race code", uses Census surname lists for Hispanic and Asian/Pacific Islander origin as well as geography<sup>2</sup>. The race/ethnicity classifications are: American Indian/Alaska Native (AI/AN), White, Black/African American, Asian/ Pacific Islander, Hispanic, and Other/Unknown. For more information on the RTI race algorithm, see <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4195038/>.

**Beneficiary Sex:** A beneficiary's sex is available from the CMS enrollment database and is classified as Male/Female.

**Length of Stay:** the number of days between the service begin date and the service through date for the entire stay, using the earliest start date and the latest end date if the stay comprised of more than one claim.

**Discharge Status:** Discharge status groups are defined using Beneficiary Patient Status Codes as below. The proportion of hospitalizations ending in each discharge status group is calculated by dividing the total number of hospitalizations ending in each discharge status group by the total number of hospitalizations.

- Home or Assisted Living/Nursing Home: 1, 4, 64, 81, 92, 84
- Skilled Nursing Facility: 3, 61, 83, 89
- Home Health: 6, 86
- Expired: 20
- Hospice: 50, 51
- Other: all other Beneficiary Patient Status Codes
