

Ambulatory Specialty Model Participants Methodology

This dataset contains various data points related to participants of the mandatory Ambulatory Specialty Model (ASM) implemented by the CMS Innovation Center. The CMS Innovation Center identifies participants in accordance with ASM's regulations (42 CFR part 512, subpart G). The data includes the participant National Provider Identifier (NPI), participant name, the organizational legal name associated with the participant, the state of a participant's service location, and ASM cohort. The data also indicates whether the participant must meet ASM's requirements for a given performance year and whether the participant is considered part of a small practice (15 or fewer clinicians) for a given performance year. When the CMS Innovation Center updates an entry on the initiative web page, a corresponding entry may be added to this dataset. These updated data points are displayed on the CMS Innovation Center's website for public consumption, primarily on the ASM web page.
