

Ambulatory Specialty Model Participants Methodology

This dataset contains various data points related to participants of the mandatory Ambulatory Specialty Model (ASM) implemented by the CMS Innovation Center. The CMS Innovation Center selects ASM participants in accordance with ASM's regulations (42 CFR part 512, subpart G). The data includes the ASM participant's National Provider Identifier (NPI), name, the organizational legal name associated with the ASM participant, and ASM cohort. The data also indicates whether the ASM participant must participate and meet ASM's requirements for a given ASM performance year. For a given ASM performance year, the data also includes the code and name of the Core-based Statistical Area or Metropolitan Division code and associated state where CMS determines the ASM participant's service location. The data also indicates the ASM participant's CMS-determined specialty type and whether the ASM participant is considered part of a small practice (15 or fewer clinicians) for a given ASM performance year. When the CMS Innovation Center updates an entry on the initiative web page, a corresponding entry may be added to this dataset. These updated data points are displayed on the CMS Innovation Center's website for public consumption, primarily on the ASM web page.
